ResearchBridge - Research comparison

Compare sources to shape your next question

Cosine similarity of the two TF-IDF document vectors (0-1; title weighted three times plus abstract; IDF fitted on all 60 papers). Higher means more similar wording, not agreement of findings or causality. This is not Pearson correlation and is independent of the query, search threshold and retrieval mode.

Fields and methods use explicit title/abstract patterns with source text. An unrecognized method is unknown, not absent. Discovery tags and fields are not official classifications.

Design and Evaluation of EMPATHICA: A Chatbot for Enhancing Medication Literacy.

Quintana Y, Bloom K, Srivastava G, Homiar A, Assaf A, Thomas G, Lowe E, Hampton D, Wontor V. Design and Evaluation of EMPATHICA: A Chatbot for Enhancing Medication Literacy. AMIA Annu Symp Proc. journal: 2024; Electronic: 2025 05 22. PMID: 41726533. https://pubmed.ncbi.nlm.nih.gov/41726533/

Discovery tags: Accessibility and insurance / Digital health and care

Research fields: Health informatics and NLP / Digital health and care services / Health services accessibility

Methods mentioned in source text: LLMs and chatbots / Mobile and digital interventions

Health informatics and NLP: Design and Evaluation of EMPATHICA: A Chatbot for Enhancing Medication Literacy.

Digital health and care services: With the increasing use of digital health interventions, AI-powered chatbots present an opportunity to improve patient access to understandable and personalized medication information.

Health services accessibility: Health literacy significantly impacts patient outcomes, yet many struggle to understand complex medication information.

LLMs and chatbots: Design and Evaluation of EMPATHICA: A Chatbot for Enhancing Medication Literacy.

Mobile and digital interventions: The research observed the interaction between participants and the web-based application, where participants asked the chatbot to measure the chatbot's usability and accuracy using various qualitative and quantitative measures and expert physician evaluation of the responses.

Enhancing Long-Term Care Efficiency: Embedded LLMs for Clinical Report Summarization and Caregiver Support.

Michelet A, Manzo G, Ritz A, Delgado P, Celi LA, Schumacher MI. Enhancing Long-Term Care Efficiency: Embedded LLMs for Clinical Report Summarization and Caregiver Support. AMIA Annu Symp Proc. journal: 2024; Electronic: 2025 05 22. PMID: 41726516. https://pubmed.ncbi.nlm.nih.gov/41726516/

Discovery tags: AI and clinical informatics / Digital health and care

Research fields: Health informatics and NLP / Digital health and care services

Methods mentioned in source text: LLMs and chatbots

Health informatics and NLP: Enhancing Long-Term Care Efficiency: Embedded LLMs for Clinical Report Summarization and Caregiver Support.

Digital health and care services: Enhancing Long-Term Care Efficiency: Embedded LLMs for Clinical Report Summarization and Caregiver Support.

LLMs and chatbots: Enhancing Long-Term Care Efficiency: Embedded LLMs for Clinical Report Summarization and Caregiver Support.

PMID 41726533 / PMID 41726516

Paper correlation score (cosine): 0.051
